Classes for groups of over 20 may be scheduled if your employees cannot attend one of the above classes. Please contact us to discuss your needs.

Your air quality permit may require opacity readings by a person certified in the proper use of EPA Method 9. Opacity training is recommended for air quality environmental consultants and environmental compliance personnel at construction sites and at any source of visible emissions.

Maricopa County area classes include a review of all Maricopa County Air Quality Department opacity standards by Al Brown, Certified Trainer for Rule 310 Comprehensive and Basic Dust Control Training.
