

The Arizona Rock Products Association's Fundamentals of Concrete Program

Fundamentals of Concrete Program:

The Arizona Rock Products Association is pleased to announce an AIA continuing education opportunity entitled Fundamentals of Concrete. This unique program provides participants with vital information regarding concrete. Professional instruction will include the following topics; materials to produce quality concrete, production of concrete, cement and fly ash, concrete properties, understanding of mix designs, product strength, acceptance and design criteria.

The Fundamentals of Concrete was designed by the ARPA Concrete Technical and Education Committee members, and includes representation from cement, admixture, fly ash, ready mixed concrete and consulting engineering member experts. Attendees will come away with a thorough working understanding of quality concrete production. In addition, the *ARPA Recommended Concrete Specifications* will be discussed and available to participants.

Course Credit:

This 1 hour seminar provides participants with one ASI/CES credit hour.

Who Should Attend:

This course is deal for architects, engineers, specifiers, suppliers, contractors, developers, owners, educators and students.

Other Presentations Available:

- C-94
- Decorative Concrete
- Others Available Upon Request
