THE ROCK PRODUCTS INDUSTRY

WHAT ARE ROCK PRODUCTS?

AGGREGATES - A combination of raw stone, sand and gravel from non-renewable materials typically mined where they are deposited and close to construction sites to keep costs low.

ASPHALT - A versatile paving material used in roughly 94% of U.S. roads and highways and ideal for industrial, agricultural, transportation, recreational and other applications.

CEMENT - The 2nd most consumed material on Earth (behind water), this binding powder is made from mined and processed minerals that can grow in strength with proper hydration.

CONCRETE - The world's most-used construction material, this composite of fine and coarse aggregate is typically lime-based and bonded with fluid cement for use in highways, high-rises, dams, canals, bridges and more.

The operations of the Arizona Rock Products firms provided jobs for 7,745 industry workers and had a direct impact of \$2.5 billion in 2017. As spending cycled back into

the economy, total economic impact of \$4.9 billion was created, with an indirect impact of 25,674 total jobs. Learn how to become a part of this thriving industry and start your career in the rock products industry today!

DID YOU KNOW...

- Arizona has 567 rock products facilities which includes; aggregate mines, concrete batch plants and hot mixed asphalt plants;
- There are 210 aggregate mines in Arizona;
- A 2000 square foot house requires 400 tons of aggregate material;
- A one mile lane of freeway requires about 38,000 tons of aggregate material;
- Aggregates make up 94% of asphalt pavement and 80% of concrete;
- Twice as much concrete is used in construction than the total of all other building materials, including wood, steel, plastic, and aluminum;
- A metropolitan airport requires 1,320,000 tons of aggregate material.
