Certificate of Conformance for Concrete Production Facilities

It is hereby certified that

Rock Solid, Plant #5 3666 N. Higley Road, Mesa, AZ 85215

has been inspected by the undersigned registered professional engineer for conformance with requirements of the "Check List for Ready Mixed Concrete Production Facilities." As of the inspection date, the facilities met requirements as stated below.

Operation: Truck Mixing

Batching System: Fully Automated

Recording: Cementitious, Aggregate, Water, Admixture

Executive Director

08/30/2022

Date signed by ARPA Executive Director

08/24/2022

**Inspection Date** 

08/24/2024

**Expiration Date** 

Arizona Rock Products Association

This Company will maintain these facilities in compliance with the Check List requirements and will correct promptly any deficiencies which develop.

Notice: The check list indicates only that plant facilities are satisfactory for the production of concrete when properly operated. Conformance of the concrete itself with specification requirements must be verified by usual inspection methods in accordance with sales agreement.

## 11. CONCRETE BATCH PLANT INSPECTION REPORT

| h.  | Batch Size in Cubic Yards or Meters.  | $\boxtimes$           |                   |             |
| i.  | Date and Time when Batch was Loaded.  | $\boxtimes$           |                   |             |
| j.  | Type and Name of Specialty Admixture or Ingredient and Amount Batched.              | $\boxtimes$           |                   |             |
| k.  | Place Where Extra Water Added at Request of Receiver and his signature or initials. | $\boxtimes$           |                   |             |
|     | The Concrete Plants satisfies the indicated criteria and is capable of pro          | oducing concrete with | in the acceptable | tolerances. |

### Notes:

- 1. Items 1a and 1b evaluated as follows:
  - Aggregate stockpiles located to prevent contamination and arranged to assure that each aggregate as removed from its stockpile is distinct and not intermingled with others.

Yes No No

- b. Separate storage bins or compartments for each size and type of aggregate properly constructed and discharges to prevent mixing of different sizes or types.
- c. Aggregates meet applicable specifications.
- 2. Adequate heating and/or chilling
  - a. Not required for plant approval.
- Scales and Batches Accurate within Acceptable Tolerances
  - Applicable tolerances are consistent with information contained in the latest addition of ASTM C 94 Standard Specifications for Ready Mixed Concrete.

### **Definitions:**

### **Manual Systems**

Batching devices are operated manually. Individual batch target weights, moisture adjustments, and volumetric measuring systems are manually determined and verified by the batch operator. Discharge of the batch is performed manually by the batch operator. These systems are typically assisted by pneumatic, electric or hydraulic power, but may be hand operated.

### Semi-Automated Systems

These systems provide mechanisms that start the weighing and volumetric measuring devices for the batch. These systems will stop the weight and measuring upon attaining the required batch tolerances. Discharge of the batch may be automated upon attaining acceptable batch tolerance, or may be performed manually. These systems may or may not include interlocking mechanisms for out of tolerance batches.

### **Fully Automated Systems**

A single starting mechanism provides target weights and volumes, begins the weighing and measuring process and ends this process when the targeted batch proportions are within tolerance. Out of tolerance batches must be manually adjusted to within tolerance and/or accepted by the batch operator. Once the batch tolerances are met or manually accepted, discharge of the batch will begin automatically.

# 6. Verification of Inspection and Application for Certification
